## **DETAILED ACTION**

## Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 16-24, drawn to a method of cooling a fiber amplifier, the method classified in class 174, subclass 15.1+.
- II. Claims 1-15, drawn to a system (device) for cooling a fiber amplifier, classified in class 359, subclass 341.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case (2) the system may use a straight fiber with fluted support [Figure 5, specification page 9] that does not require a method using a serpentine fiber or an emulsion of phase change material.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Application/Control Number: 10/815,920

Art Unit: 2883

Invention I contains the following patentably distinct species of the claimed invention:

Species A, drawn to a drawn to a method of cooling a fiber amplifier comprising: mounting a longitudinally-extending fiber amplifier in a serpentine manner [Figure 4].

Species B, drawn to a drawn to a method of cooling a fiber amplifier comprising: mounting a straight fiber with fluted supports [Figure 5].

Species C, drawn to a drawn to a method of cooling a fiber amplifier comprising: using an emulsion of phase change material [Figure 6].

Invention II contains the following patentably distinct species of the claimed invention:

Species D, drawn a system (device) for cooling a fiber amplifier comprising: a longitudinally-extending fiber amplifier in a serpentine manner [Figure 4].

Species E, drawn a system (device) for cooling a fiber amplifier comprising: a straight fiber with fluted supports [Figure 5].

Species F, drawn a system (device) for cooling a fiber amplifier comprising: an emulsion of phase change material [Figure 6].

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species from A-C of invention I or a single disclosed species from D-F of invention II for

Art Unit: 2883

prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Application/Control Number: 10/815,920 Page 5

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Timothy L. Rude whose telephone number is (571) 272-2301. The examiner can normally be reached on Mon-Thurs.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Frank G. Font can be reached on (571) 272-2415. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
